VII. CODIFICATION BIOGEOGRAPHIQUE DES LOCALITES
DU DISTRICT BACĂU DANS LES TÉTRADES DU RÉSEAU
UNIVERSAL TRANSVERSE MERCATOR

ANDY Z. LEHRER

Avec ce travail nous ajoutons encore un des plus étendus districts de la Moldavie à l'action de réaliser l'image biocartographique unitaire et d'une manière internationale de cette province.

Pour la codification et la cartographie des localités dans le réseau *Universal Transverse Mercator* nous avons utilisé les mêmes procédés, bien habituels dans les projets biogéographiques internationaux et décrits de plusieurs fois dans nos contributions sur les districts Botoșani, Iași, Vaslui, Neamț etc.

En concordance avec la législation administrative territoriale de notre pays, le district Bacău a : 2 municipes, 5 villes, 18 localités composantes de ceux-ci, 80 communes (desquelles 6 sont sous-urbaines) et 491 villages.

Les abréviations de l'index sont les suivantes : c. = commune ; c. s. = commune sous-urbaine ; l. c. = localité composante ; m. = municipe ; o. = ville.
